Analysis of Z Score for BSE Listed Airline Companies in India

Ms. Sayee Kulkarni

Assistant Professor, MBA(Finance), NET

Kaveri College of Arts, Science and Commerce Karve Road, Pune, sayeekulkarni@gmail.com

Abstract

The research paper focuses on calculating the Altman's Z score for bankruptcy prediction for the airline industry in India. The modified Z Score for non manufacturing companies is used for analysis. 6 listed companies namely Jagson Airlines, TAAL enterprises, Global Vectra Helicorp, Spice Jet, Jet Airways, IndiGo Airways and the government owned Air India is considered for analysis. The Z scores for three preceeding years is calculated and analysed. The research paper states that the overall aviation sector is in financial distress . Only IndiGo airways is in the safe zone with a Z score of more than 2.9. All other companies are in financial distress.

Keywords- Altman's Z Score, Airline industry, BSE, bankruptcy prediction.

INTRODUCTION

Bankruptcy is the failure of a business. It is when a company is unable to honour its financial obligations. It is a situation where a firm is unable to repay debts to its creditors. With more and more companies facing liquidation process, there is a need for a warning signal system for bankruptcy. The world over there have been many models for predicting financial distress. Some of the popular ones are William Beaver model, Wilcox Model etc. One such model is the Altman's Z Score. It is usually stated that any company in financial distress shows negative cash flows. But that is not the case always. There are various other factors which can lead to financial distress. This paper tries to apply

the Altman's Z score model to the BSE listed companies in the airlines sector.

DEFINITIONS

Altman's Z Score:

The Altman's Z score was first developed by Edward Altman, financial economist and professor at Stern School of Business in the year 1968. The Altman's Z score makes use of fundamental financial variables to predict bankruptcy. The Z score is derived using multiple discriminant analysis (MDA). The Z score was originally developed for manufacturing firms. It was also modified for service industry firms and also for emerging markets.
